

## BIO ~ Leighton J. Wolffe

**Leighton J. Wolffe**, co-founder of NorthBridge Energy Partners, has more than 25 years experience in the facilities and energy technology industries. Leighton's career began in complex medical research, acute health care and university environments in roles responsible for operations, utilities, engineering, and new construction. His interest in energy technologies led to positions working with energy companies, manufacturers and systems integration firms designing and developing innovative hardware and software applications.

- Leighton's experience across multiple industries and customer segments enables him to play an integral role in the design, development and implementation of successful energy technology initiatives and projects. Leighton provides expertise and domain knowledge to help clients navigate their way through the highly dynamic intersection of energy markets, emerging technologies and the industry players.
- He is professionally active on a national level with energy companies, building system manufacturers, software developers, systems integrators, facility professionals, and government agencies and serves in key roles as owner's advisor, technical consultant and project facilitator providing knowledge of energy market and technology trends to help clients create and apply sustainable solutions.
- In a previous position as VP Strategy for Constellation Energy, Leighton founded the NewEnergy Alliance and formed commercial relationships with building automation and energy management companies and systems integrators to develop applications around Constellation's VirtuWatt Platform, which connected buildings directly to energy markets and Constellation's trading desk. Leighton is co-developer and patent holder for this groundbreaking platform.
- Leighton attended Cambridge College and New England College in the UK, with a focus on business and history.
- He frequently presents at industry events and writes articles on industry and technology trends. He also has developed innovative methodologies to apply energy analytics.

## ABOUT NORTHBRIDGE ENERGY PARTNERS

NorthBridge Energy Partners, LLC is a specialized consulting firm that provides industry expertise, market intelligence, decision support, and executive education to organizations and business leaders navigating complex power markets and energy initiatives. NorthBridge works with clients evaluating strategic opportunities to position their technologies, properties, products and services for participation in electric energy markets. They help their customers develop new business models, refine existing market strategies, and create value across regulated and competitive energy environments.

NorthBridge Energy Partners founding principals, Leighton J. Wolffe and Peter Kelly-Detwiler, have 50 years of combined experience in electricity markets, demand management, and the energy technology industries. Together, they possess a unique body of expertise when it comes to combining these disciplines to develop and deploy strategic business development and technology initiatives.

Having worked together for a number of years as senior executives in the energy industry, Leighton and Peter sponsored and led development of VirtuWatt—the first-to-market demand management platform connecting industrial facilities and commercial buildings with competitive electricity markets. Since then, they have been active as consultants helping clients to develop innovative products, services and technologies that can interact with energy markets and participate in both supply side and demand side revenue streams.
